Welcome to our online edition of SEU MUG. Through this newsletter you are able to receive subscriber-only material such as special notes from the Users Group leaders, Podcasts, and detailed step-by-step instructions with pictures of demos given during meetings. If you have any questions, comments, concerns or suggestions please send all e-mail to seumug@gmail.com.

This edition of SEU MUG online is an overview of our fifth meeting. This week Vice-President Madison Beresford gave a keynote on iPhoto and Picasa. These applications allow you to organize, edit, share, and publish your entire photo album with ease.

In iPhoto we discussed how to correct the exposure of your picture by bringing up the adjust palette and adjusting the exposure slider. You can also color correct your images by hitting enhance. Because people take pictures holding the camera sideways, you can rotate the image to it's proper position.

The same techniques you learned in iPhoto also apply to Google's Picasa. The terminology and techniques are virtually the same, thus giving the user the versatility to move between both applications if necessary. You are able to use Picasa with other Google software and services such as Hello the photo IM client, and Blogger the blogging service offered free to you ready for your pictures.

The next time we meet, we will be joined by Austin Sarner who wrote the application AppZapper: the amazing software that not only trashes the application, but other hidden associated files that go along with it as well! The week after, we plan to have Jason Brown, and possibly Andre' Henry, give us a demo on the innovative Garageband studio recording software.

If ever you have a question about your Mac or PC, or anything technology related, feel free to send us an email at: seumug@gmail.com.
